TECHNICAL SKILLS

- **Infrastructure, Data Center & Operations – Intermediate**
- Operations in critical environments, following SOPs, SLAs, and operational checklists
- Execution of technical inspections and operational routines
- Inventory control and asset organization
- Physical fault diagnosis and initial troubleshooting
- Installation, organization, and maintenance/replacement of hardware
- **Operating Systems (Linux/Unix)**
Linux/Unix – Basic: directory navigation, file management, process verification, basic log analysis, and initial troubleshooting
- **Networking – Basic**
- IP addressing
- Connectivity
- Switches
- Basic cabling (copper)
- **Tools & Systems**
SAP – Basic: opening and tracking operational records
Microsoft Excel – Basic: operational control, organization, and record keeping
- **Languages**
- **Portuguese:** Native
- **English – Basic (A2):** technical

EDUCATION

Postgraduate: Information Technology / Infrastructure / Cloud Computing
Anhanguera Educacional 01/2026 - 11/2026
Postgraduate degree focusing on infrastructure, data center environments, cloud computing, servers, networks, and high availability.

Technologist 05/2022 - 07/2024
Systems Analysis and Development - Anhanguera Educacional

Systems Development Technician
ETEC Euro Albino de Souza - Mogi Guaçu-SP

PROFESSIONAL EXPERIENCE

Practical Experience in Infrastructure and Hardware
(Self-employed / Laboratory)

- Assembly and disassembly of computers (desktop)
- Replacement of components: HD, SSD, RAM memory, processors, video cards, power supplies, and coolers
- Application of thermal paste and thermal optimization
- Diagnosis and correction of hardware failures
- Installation, configuration, and optimization of operating systems
- Physical organization of components and basic cabling

Field Technical Operator — Jan 2016 – Present 01/2016 - Atual
SYLVAMO - Mogi Guaçu-SP, SP

- Working in a critical operating environment, following standard operating procedures (SOPs) and safety standards
- Monitoring critical parameters and processes, with recording and traceability in corporate systems (SAP)
- Identifying operational anomalies, opening tickets, and supporting initial fault diagnosis
- Working in accordance with SLAs, deadlines, and prioritizing demands according to criticality
- Interfacing with multidisciplinary teams, leaders, and support areas
- Continuous operations with a high level of responsibility, organization, and attention to detail

reading and understanding of
documentation, tickets, and
commands; basic communication for
operational support (under continuous
development)
